

Boost Project Results THE RIGHT WAY

You have a vision for how your team can leapfrog expectations and move the company closer to strategic goals. But you need the resources to do it. Budget constraints and recruiting issues have you evaluating contractor options across the globe. Many offshoring options provide cheap labor, but time zone differences, miscommunication and lack of English fluency can make it difficult to achieve a mission-critical software build in a short time frame.

Instead, nearshoring with Gorilla Logic gives you access to talented developers in your time zone. See the difference for yourself.

TIME ZONE ALIGNMENT

WITH GORILLA LOGIC

Aligned time zones allow for constant communication throughout the workday.

WITH AN OFFSHORE TEAM

Only having a 1-2 hour overlap in working hours means teams are passing the baton rather than communicating in real time.

COLLABORATION

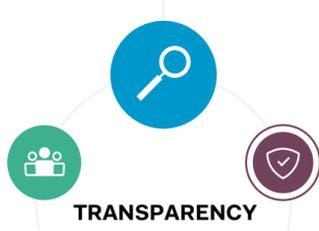

WITH GORILLA LOGIC

True Agile collaboration happens naturally as the onshore and nearshore teams work together in real time to manage shifting priorities, resolve bugs, document solutions and keep your project rolling.

WITH AN OFFSHORE TEAM

Collaboration is difficult without real time communication. Routine code reviews become a time suck as managers have to document and clarify issues at the start and end of each day instead of utilizing spontaneous check-ins.

TRANSPARENCY

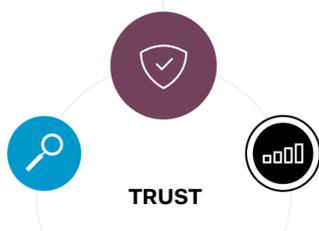

WITH GORILLA LOGIC

Between daily Scrums, on-demand chats, video conferences and iteration demonstrations, the onshore manager knows precisely what is going on with the project at all times.

WITH AN OFFSHORE TEAM

Brief check-ins don't give stakeholders transparency into how the project is really going. An offshore project manager can create a choke point between the teams, and technical details are lost in translation.

TRUST

WITH GORILLA LOGIC

Trust is built daily as team members get to know one another and bring their best work to the table (English fluency sure helps here). Team trust facilitates honesty, accountability and commitment to deadlines.

WITH AN OFFSHORE TEAM

Trust is an inherent part of Agile, and it's hard to trust people you don't know. A lack of trust degrades progress by making team members feel they need to over-document and triple-check the work.

PROJECT RESULTS

WITH GORILLA LOGIC

It all adds up to a successful project that achieves the ideal balance of scope, resources and velocity. Stakeholders appreciate the end result, while team members appreciate the collaboration and control.

WITH AN OFFSHORE TEAM

It all adds up to a project that demands more resources, risk and time than anticipated.

Accomplish More with GORILLA LOGIC

There's a reason nearly all our clients come back for more after their first project with Gorilla Logic. The collaboration, transparency and overall results are unlike any other outsourcing solution. Experience the difference for yourself and see how working directly with English-fluent developers in your time zone, using your own processes, can help you accomplish more with your budget and reach your strategic goals.

Scale with Gorilla Logic's nearshore teams and launch more critical projects, faster.
